THE LATEST IN DIVE-GEAR INNOVATION

Total Illumination ▶

Visibility is the key ingredient of the Reactor Trident, thanks to Never Dark technology, which combines the short-term brightness of Superluminova (a phosphorescent material) with the long-lasting glow of tritium gas tubes on the face. The Trident also boasts a triple O-ring screw-down crown, secure screw-bar case-to-band connection and a hardened K-1 crystal. Depth rated to 200 meters.

MSRP \$400 CONTACT reactorwatch.com **154**

Combat Colors ▼

The military-style Luminox line gets eye-popping in the EVO Navy SEAL Colormark series. Water resistant to 600 feet, these carbon-reinforced polymer-injection molded watches have unidirectional bezels, scratch-resistant mineral crystals and a double-gasket push-in crown. Divers will like the ease of reading yellow, blue, green or orange markings on a jet-black face.

MSRP \$296 CONTACT luminox.com **152**

Just Keeps Going ▶

Eschew the cost, hassle and environmental impact of battery changes, and do it at a great price. The professional diver uses Citizen's solar-powered Eco-Drive system and makes it available in a model that combines a rugged build with clean lines and a 900-foot depth rating. Features include a screw-back case, screw-down crown and one-way rotating bezel. **MSRP \$295 CONTACT** citizenwatch.com **150**
